Trade Dependence

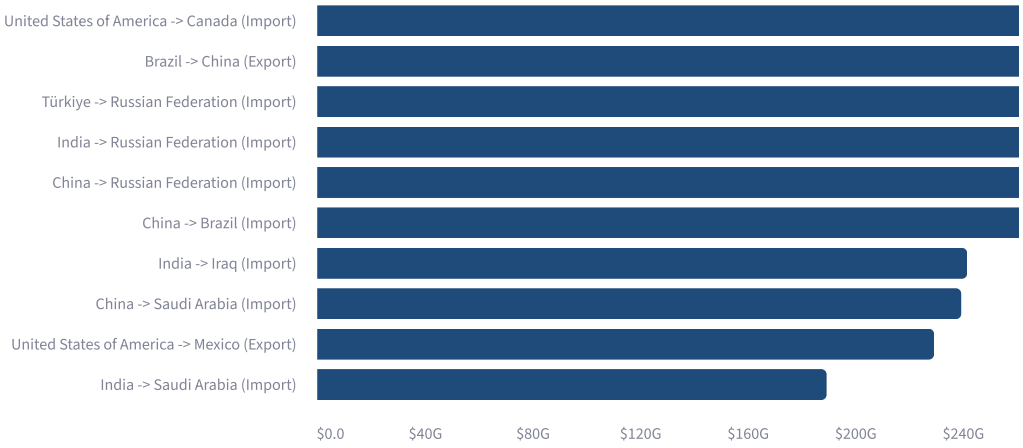
Scale becomes dependence when a small number of bilateral corridors and commodities dominate the selected trade.

Scope: All trade from 2019-12 to 2026-09.

Largest corridor	Leading pair	Commodities in leadi…	Highest partner share
$594.2B	United…	6	73.4%

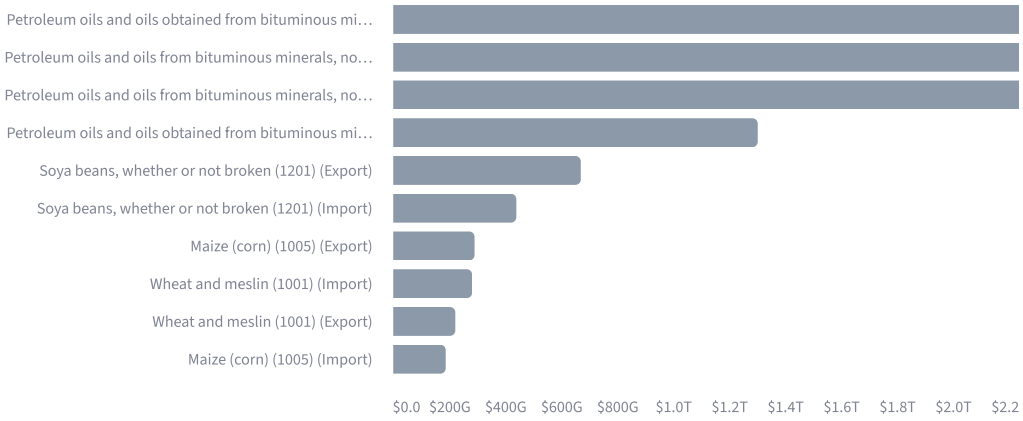
United States of America and Canada form the largest corridor in the current scope.

A small number of bilateral corridors dominate observed trade value



Download corridor ranking

Petroleum oils and oils obtained from bituminous minerals; crude (2709) is the largest commodity channel in the current scope



Partner concentration shows where bilateral dependence becomes visible

Reporter	Partner	Flow
Russian Federation	China	Export
Netherlands	Belgium	Export
Russian Federation	Brazil	Import
Panama, excl.Canal Zone	United States of America	Import
India	Iraq	Import
South Africa	Botswana	Export
China	Singapore	Export
Egypt	Italy	Export
United States of America	Mexico	Export
China	China, Hong Kong SAR	Export

Methodology

- All three views on this page read from `analytics_marts.fct_reporter_partner_commodity_month` so the analysis stays at the canonical reporter-partner-commodity-month-flow grain.
- Partner concentration is computed as each reporter-partner corridor divided by the reporter total within the same selected flow.
- Commodity labels come from `analytics_staging.stg_dim_commodity` when present and always retain the commodity code in brackets.
